

Member Specific Tasks:

Taha:

- Created the Artifact model
 - Created all the necessary fields, implemented Parcelable class to use later to send artifact data from RecyclerView to ExpandedView
- Created the initial Add Item method
 - Allowed users to enter in fields, that gets saved and uploaded to the realtime database (Aryaan helped to finish the method, alongside finishing the XML layout)
 - Created the initial XML layout and also connected the image uploader helper code
- Created the RecyclerView method and associated XML layouts
 - Setup the RecyclerView so users can scroll through the database of artifacts (other members added functionalities like saving, liking, and commenting)
- Created the Expanded View method for a single artifact and associated XML files
 - Created the functionality of when the user clicks an artifact on the RecyclerView, the selected artifact's data is sent to a new expanded view with all the artifact's info via a bundle and intent (Kavya implemented the comment functionality in the expanded view)

Leo:

- Implemented artifact key word search
 - Added a search bar to the artifact RecyclerView
 - Searches across all artifact fields using case-insensitive substring matching
 - Updates results while the user types and restores all artifacts when the search is cleared
- Added navigation to the Saved Artifacts screen
 - Created a Saved Artifacts button on the artifact list page
 - Connected the button to the existing SavedArtifactsFragment
- Implemented save/unsave functionality for artifacts
 - Added outline and filled bookmark icons to each artifact row
 - Saves artifact lot numbers under the logged-in user in Firebase
 - Allows users to unsave artifacts by clicking the bookmark again
 - Ensured saved artifacts appear in Saved Artifacts RecyclerView
- Integrated the search and save/unsave features with newer changes from main
- Improved and cleaned up home-page interface

- Removed unused starter-code buttons
- Adjusted buttons and renamed for clarity

Kavya:

- Created the user class + linked it with existing login / signup logic (implemented by Yucheng)
 - Allows for both regular and admin users with their respective abilities
 - Ensured that certain features are visible to only admin users
- Updated existing code for managing artifacts (add/delete only visible to admins)
- Created a fragment to implement logic for saved artifacts and the associated XML layout (displays in a RecyclerView already created, but does not implement ability to save as this was done by Leo)
- Created the comment class
- Created the comment adapter and the associated XML layout to display individual comments in rows
 - All users can comment on artifacts
 - Admin users can edit / delete anybody's comment by long pressing on an existing comment and choosing either edit or delete
 - Before the admin actually edits or deletes a comment, they get a confirmation on whether this action was intended or if they want to cancel
- Fixed final small bugs with UI
 - Saved artifact flag and like heart icon not staying consistent across views
 - Comment edit & delete confirmation popup theme inconsistency

Aryaan:

- Created Edit Artifact fragment so admins can edit existing artifacts
 - Since this fragment has so many elements, it was made as a constraint layout inside of a scrollable layout
 - Looks into our firebase's selected database and allows the user to edit existing artifacts.
 - The user does not need to know an arbitrary key to find the artifact they want to edit, they can simply search by name and a list of existing artifacts will show from which the user can select the wanted one.
 - If the artifact does not exist, the user can't change anything
 - Uses Supabase to support image uploading
- Created Delete Artifact fragment
 - Completely deletes an artifact from the firebase database
 - Has a confirmation screen as asked to avoid accidental deletion

- Added colours to the UI to make it feel more thematic

Yucheng:

- Implemented the Login the signup screen using MVP model
 - Strictly follows the MVP model
 - Validates user inputs upon entering
 - Update UI elements when switching between login / signup
 - Login / register the user with FirebaseAuth, provide an error message to the user if failed.
 - Remember the user's login status. Can logout using logout button
 - Designed Unit test for the presenter
- Allow like count to be stored in firebase realtime database
 - Stores what artifacts a user has liked in the database. Load the like status when loading the artifact, and allow the user to unlike.
 - When the like button is hit, update it in the database. The UI has an instant update upon clicking the like button. If updating the database fails, an error message is displayed and the UI is then reverted.

Jingqi:

- Create Like Functionality for Artifacts
 - Implemented the "like" feature allowing users to like artifacts by clicking the like button on each artifact row
 - Prevents users from liking the same artifact duplicately
 - Users can unlike the artifacts the have previously liked
- Create Like Functionality and the associated XML to display
 - Create a like button for users to express their likes
 - Change the color for the symbol of like to make it apparent when an artifact has been liked with its icon changing from grey to red
- Create Pagination Functionality
 - Implemented pagination for the artifact list to improve browsing performance
 - Users can use next/previous/page selection to jump to specific pages, making navigation faster and more convenient
 - Users can select page size(12, 24, All) to choose how artifacts are displayed
- Create Pagination Functionality and the associated XML to display
 - Add next/previous/page selection button on RecyclerView
 - Show the total amounts of artifacts on RecyclerView

- Add a page indicator showing the current page number and total number of pages available

Meeting Summary Documentation:

July 6th:

- Made the Jira and added to-dos
- Decided sprint dates
- Planned another meeting for Thursday after term test to decide who's doing what

July 9th

- Assigned user stories to each other so we know what we're working on for our first sprint
- Updated Work Agreements:  Team Agreement
- Confirmed Meeting for July 10th
- Looked at User Stories Document

Sprint 1

July 10th

- Asked everyone three stand up meeting questions.
- General consensus was almost everyone is still exploring Android studio, MVP, and other things from the codebase.
- Everyone is working towards finishing some stuff by the next meeting on Monday.
- There are no impediments (except our schedules - exams and other school work)

July 13th

- Everyone's is on track to complete their tasks for the week
- Artifact and User classes have been started
- The login/signup screen has been started
- Add/edit artifacts has been started

July 15th

- Many people just messaged their three stand up meeting questions later, due to personal issues
- Overall good progress is being made with some difficulties with Firebase
- The artifact class, add item class, edit artifact class, saved artifact class, and other tasks are progressing well

July 17

- Due to everyone's busy schedules due to midterms and other personal commitments, we decided to skip the meeting in advance. However, we were still in communication with one another on Discord

July 20th

- Discussed the three stand up meeting questions
- Generally, everybody has made a good amount of progress on their respective tasks and what they have been working on together
- Began discussion about merging before beginning the second sprint

Sprint 2

July 24th

- Everybody has made strong progress
- Began discussing further steps as first tasks were being completed
- Talked more about working together on tasks to improve efficiency, especially as some members had finished big portions

July 27th

- Talked about approaching the end of the project
- Planned how to ensure that all work will be complete for the deadline
- Three meeting questions

July 31st

- Discussed last steps and deadline to have work done before the hard deadline to allow for smaller changes and bug fix time
- Three meeting questions

August 3rd

- Asked three standup questions
- The group was on track to finishing
- We were almost done merging our final features after we had our PRs approved by our reviewers

August 6th

- Discussed final steps for submitting and responsibilities for each member to wrap up
- Planned minor logistics for submission process (distribution of remaining work before submissions)
